

COMPANIONRX™ PROGRAMS

MEDICAID, COMMERCIAL & EMPLOYER GROUPS

CompanionRx™ is a SinfoniaRx program that provides customizable Medication Therapy Management services for Medicaid, Commercial and Employer Group plans. The program provides for comprehensive and fully customizable solutions designed to meet the unique needs of each plan served. Utilizing prescription claims, areas for improvement in a patient's healthcare quality are identified and then intervened on by our credentialed MTM experts to assist in the resolution of the issue identified. With our flexible platform, there is the ability to build standard or customized programs for each unique population.

Program Service and Support

SinfoniaRx can implement standard programs, which provide a full range of alert targeting with patient and provider interventions made by our dedicated clinical pharmacy staff. Custom programs, designed to meet specific population needs, plan goals or budgetary requirements, can be implemented to provide optimal service and outcomes.

The outcomes driver of our program is SinfoniaRx's internally developed, proprietary software, RxCompanion™ which is a highly customizable and scalable platform designed to identify medication and other health related problems. This is done through our intensive claims analysis process, using our 300+ clinical algorithms to target opportunities for improvement in drug therapy based on the program targets.

MEDICAID MTM PROGRAM OFFERINGS

A COMPANIONRX™ PROGRAM

SinfoniaRx offers an innovative, highly effective approach to the completion of MTM services for Medicaid plans and their beneficiaries.

Our patient-centered programs feature a proactive and targeted approach that analyzes claims data to identify potential drug therapy problems. Interventions are then completed using multiple touch points with the patient, their caregiver, their local pharmacist and/or their prescriber(s). These interventions are facilitated by credentialed MTM providers located at our dedicated clinical call-centers and through our retail pharmacy partners.

Medicaid MTM Program Offerings

Flexible Medicaid Program Design

SinfoníaRx's Medicaid programs are built to offer targeted services to fit the needs of each plan, their state specific requirements and unique patient populations. Our programs focus on addressing HEDIS and Medicaid Finalized Rule measures, with modules surrounding the following disease states.

Behavioral Health

Cardiovascular

Diabetes

Respiratory

HIV

Pain

Outcome Focused Proactive Service Model

The outcome drivers of our program are SinfoníaRx's internally developed, proprietary software, RxCompanion™ and our proactive clinical outreach model. RxCompanion™ is a highly customizable and scalable platform designed to identify medication and other health related problems for the target disease states, utilizing the clinical algorithm targets of the program. Our algorithms focus on HEDIS and Medicaid Finalized Rules to address opportunities for improvement in areas of Medication Adherence, Treatment Guidelines, and Safety.

Our proactive outreach approach utilizes direct patient contact, as well as prescriber and pharmacy outreach, and is completed by our dedicated team of credentialed providers who are experts in providing MTM services. This multifunction platform and intervention approach allows for our clients to implement a standardized or highly customized MTM program for their specific Medicaid plan and achieve the program outcomes they desire.
